Skills

Frontend:

Remix

Next.js

React.js

HTML

CSS

Tailwind

Backend:

Node.js

Fastify

Express.js

MongoDB

PostgreSQL

Postman

Altro:

Jest unit testing

Linux

GIT

Education

Istituto San Paolo, Sorrento
Administration, finance and marketing
2018
high school diploma

Università Di Salerno
Computer Science
Started in 2019

Summary

I have knowledge in both Frontend and Backend development, acquired through:

- Workshop Epicweb (https://www.epicweb.dev/)
- The Odin Project's Full Stack JavaScript path (https://www.theodinproject.com/paths/full-stack-javascript)
- Personal projects and experiments

In these courses, I learned to create fullstack applications with Remix (https://remix.run/) and Next.js (https://nextjs.org/), and to develop API servers with Express.js and MongoDB.

I have also experimented with Fastify (https://fastify.dev/) for developing APIs, preferring it over Express.js for its configurability and ease of testing. I use Linux (PopOS!) as my operating system and have experience with terminal commands and GIT.

Projects

Personal website

https://github.com/paolodo/personalwebsite
🔗 https://paolodo.github.io/personalwebsite/

Personal Website created with React, responsive layout implemented through React.

Social Media

https://github.com/paolodo/penguinsocialmedia
🔗 https://penguinsocialmedia-ndxg.vercel.app

This project is a simple social media platform developed using the Remix framework for the frontend, Supabase for the backend, and it implements features such as GitHub login, post creation, comments, and reactions (likes). I have implemented a responsive layout using the Tailwind CSS framework.

Technologies Used:

- Frontend: Remix, Tailwind CSS
- Supabase (PostgreSQL as the database, Auth for authentication)
- Authentication: GitHub OAuth
- Hosting: Supabase for the backend and Vercel for the frontend

Key Features:

- GitHub Authentication
- Post Creation
- Post Comments and likes

Musica (Work in Progress)

🔗 https://github.com/gdorsi/musica

Collaborative local-first app for musicians, allowing the organization and sharing of audio files.
